Is Mavis becoming a tame house cat?

Recently, Mavis was seen and confirmed eating from a human's hand. She showed contentment in the food, and she licked the human's hand to get all the food off. She even bit the hand, but not too hard.

Mavis was one of the most fearsome cats of her litter toward humans - but right now she shows no sign of aggression toward the human in the picture. She looks comfortable and seems to feel safe enough around the human. People are starting to wonder - is Mavis becoming a tame house cat?

Stripy, Mavis's sister and best friend has a take on this. She said that Mavis "decided to go along with eating from the human's hand because she wasn't sure what to do". If this is true, Mavis might actually feel trapped inside the cupboard that she is in, and she might want to get her kits and leave. But how can she do that? The cupboard door is too heavy to push!

Makenna Is Doing the Chubby Stretch!

This is a very rare moment, when a cat does the Chubby Stretch. It involves bending your chubby forelegs up, and touching your thin hind legs to the forelegs. Only certain cats have the body structure to do it - it looks like Makenna is one of those cats.

Doing the Chubby Stretch will make all four of your legs ache afterwards, but it is a great way to stretch out all of your tense muscles. Makenna is doing it because she doesn't have anywhere to run or exercise.

All the local cats in the are have been inspired to try the Chubby Stretch. Unfortunately, only one out of four cats can do it. Two out of four cats will not be flexible enough, and one out of four cats will dislocate a chubby foreleg. The hospitals already are filled up with patients with dislocated chubby forelegs.

“Sometimes, It’s better not to try something.”

- JUDY, WHO’S IN THE HOSPITAL WITH A BROKEN CHUBBY FORELEG

The picture of Makenna doing the Chubby Stretch (above) is already circulating on TV and social media. Already one hundred cats have tried it, and half of them weren't flexible enough. Twenty five of them did it, and they posted photos too. And then there were the unlucky twenty five cats who broke a chubby foreleg.

But not only cats saw this photo - there were some human sightings too, but they didn't seem to care about it. Makenna is now sleeping peacefully after a long Chubby Stretch, but little does she know that her CatTube account just gained a hundred followers. That's going to be a shock.
